

Hello! Welcome to round 1 :)

This prework will help us understand your skillset and match you with the right project and role inside AI learning labs. This is designed to not take a lot of your time at this stage while ensuring that we are able to understand your skillset and move you to the next stage. You can pick from the below 2 options.

Do share github links/ Project access links/ blogs that you had written while building or anything else that can help us understand your application.. :)

Estimated time : 1.5 - 3 hours :)

Option 1 : Pick a project that you have extensively worked on. It can be a full scale deployed project in your previous role or a pet project that you love. Try to pick a project from your portfolio that can help us understand how well your strengths are aligned to our requirements. Help us understand the following things about this project

Section 1: Context (Brief)

- One-paragraph description
- Primary technical constraints

Section 2: Technical Implementation (Detailed)

- Architecture diagram + 2-sentence explanation
- Code walk-through of one critical function
- Data flow for one key operation

Section 3: Technical Decisions (Core)

- Two most significant technology choices with trade-offs
- One scaling bottleneck and mitigation strategy

Section 4: Learning & Iteration (Concise)

- One technical mistake and what you learned
- One thing you'd do differently today

Or

Option 2: Alternative: The "Technical Decision Log" Approach:

a) "Document 3 key technical decisions from your project using this template:"

1. Decision: [What you chose, e.g., "Use Redis for caching"]
2. Alternatives Considered: [2-3 options you evaluated]
3. Trade-offs: [What you gained/lost with your choice]
4. Outcome: [How it worked in practice, any surprises]

b) Technical code walkthrough walk-through of one critical function from your project.

You can submit video answers to the questions too.

Ps: Feel free to use AI to refine however this is an attempt to understand your thoughtflow and your unique strengths and we would love to read your original thoughts. <3

Submit: You submit this prework within 3 days from the date you receive it.
